INTERTON | SCOPE

Enjoy a more comfortable sound

Get the full sound picture

Interton Scope has been designed to provide a more comfortable sound that will help you get used to your new hearing instrument right away. With more details in the sound picture, you get a richer and more natural sound experience. You will also find that Interton Scope gives you a better sense of where the sounds around you are coming from.

Don't miss a word

With the improved sound of Interton Scope you will find it much easier to follow and engage in conversations, even in noisy surroundings. Intelligent features allow you to focus on the person speaking to you while maintaining a natural perception of the surrounding sound sources. This more nuanced sound will enhance your ability to understand speech, for instance when you are sitting at a restaurant table or chatting with a friend at a party.

Rest assured that the highly effective Feedback Guard will eliminate any uncomfortable whistling sounds whenever it's needed.

Relax, it won't whistle!

As you probably have heard or maybe experienced, a whistling sound may occur when something comes too close to the hearing instrument. This is called feedback. To eliminate those annoying feedback sounds, Interton Scope features the latest feedback management technology, which handles virtually any situation where feedback might be an issue. The new and very efficient Feedback Guard works as an "emergency brake" when needed. For example, when you give someone a hug, put on a hat, or hold a telephone to the ear.

What's your Scope?

The Interton Scope series consists of two hearing instrument families, Interton Scope 4 and Interton Scope 6. Each family comprises a range of different models ensuring there is one that meets your exact hearing needs. Which family and model to choose depends on your lifestyle and daily activities. Your hearing care professional will help you find the one that best matches your individual requirements.

Maintain your focus

Both Interton Scope 4 and Interton Scope 6 automatically adjust to the surrounding noise levels, enabling you to focus on what is most important in any given situation. With Interton Scope 6 the technology is taken one step further: in noisy surroundings it automatically zooms in on the sound - typically speech - coming from in front of you. If another person then approaches from the side, it automatically zooms out again, allowing you to hear both sound sources.

Intelligent volume control

You will also appreciate the intelligent volume control that automatically adjusts the volume of Interton Scope 6 if the sound level changes, for instance when leaving a noisy restaurant for the quiet of your car. You can even "teach" your hearing system to respond to specific volume needs in different listening situations.

Interton Scope automatically detects speech in noisy surroundings and zooms in on the speaker.

If more people are talking in front of you, Interton Scope zooms out to catch all relevant sound sources.

INTERTON | SCOPE⁴

"My Interton Scope 4 hearing instruments allow me to cope confidently with all typical daily listening situations. They have a great sound and suit my needs - and my active life - perfectly."

INTERTON | SCOPE⁶

"In my daily work, I have to perform in many varied and sometimes challenging communication situations. My Interton Scope 6 will automatically adapt to the surroundings and is tailored specifically for my needs."

Typical listening situations

Interton Scope will help you in your full range of everyday activities. The table shows how well the two Scope families suits the respective listening situations.

Interton - Essential Hearing

Founded in Germany in 1962, Interton today is part of one of the world's largest hearing instrument organizations, the GN Group. We use their proven core technology in a way that falls in line with our own way of doing things. We believe that most people need a straightforward, functional and easy-to-use hearing solution at a fair price. So that's what we give them.
